

ABSTRACT OF THE DISCLOSURE

The present invention is intended to display page space layout images substantially similar to the page space images of actual newspapers and magazines and, on the basis of these images, display news items having legible character size. Display blocks for displaying images based on the electronic information having the image information of a page space having a plurality of news items and the news-item contents information associated with each news item and operation means such as a jog lever are arranged. Page space images of a newspaper for example are displayed on these display block and news-item markers corresponding to news items are displayed. When the news-item marker corresponding to a desired news item is selected, an image of the news-item contents information associated with the news-item indicated by the displayed news-item marker is displayed on the display block.
